F.u.G. Elektronik with new catalogue and lower prices

Completely revised product design, prices lower for up to 20%, customer-friendly interface program

F.u.G. Elektronik GmbH, the well-known Rosenheim manufacturer of highly precise high and low voltage power supplies, has launched a new product catalogue. Besides the new product ranges for middle and high voltage power supplies MCP and HCP all previous equipment now has got a new face with many customer-friendly features on the front plate - as 4 ½-digit displays, button for set values, release button for the output and others. The cassette power supplies of the HCE series are deliverable now also with output power up to to 350W.

For all type ranges there are available various options. On request the regulation stability can be carried out up to 10^{-6} . With PROBUS V an extremely flexible program of digital interfaces is at the disposal with Profibus DP, IEEE488, RS232, RS422, USB or LAN (Ethernet).

The prices for the power supplies haven't increased despite these improvements since 2003 and MCP and HCP lie with the newly developed production series up to 20% under those of the predecessor types. The interfaces without exception are also more favourable than the predecessor system PROBUS IV.
