

Environmental Statement

Preamble to the environment policy

FuG Elektronik GmbH designs, produces and distributes
Low-and High Voltage Power Supplies

We are making a considerable contribution to minimizing the negative impact on the environment through our production processes and environmental policy which are already in place and are being practiced, and with our product range where we mostly use steel, aluminum and copper as well as selected plastics.

The distinctive long life cycle of our product portfolio allows for practical operating times of over 15 years and is thus an important and intrinsic contribution to the protection of our environment. The careful use of the above mentioned materials allows for the disposal of disused products with a high degree of recycling and therefore also helps to reduce costs and help save the environment.

With the awareness for ethical responsibility for the environment and of course for following generations we, the management declare that the enhanced and systematic protection of the environment to our leading company objective.

The basis for which are the present guidelines for environmental policy.

Environmental policy.

Our environmental policy is characterized by the following key statements:

We pay attention to our responsibility to the environment in all of our decisions, including and above statutory provisions, and implement constant measures to improve the environment.
We encourage all employees to act in an environmentally conscious way in the company but also outside the workplace.
We are open to communication with our business partners and employees on all matters of environmental protection.
We manage our resources of material and energy in a responsible manner and pay special attention to extensive recycling of materials after the due expiry period of our products while developing the new products. This is especially true for electronic components as well as for the packaging of our products.
We want to keep the negative (environmental) impact on the air and water, noise and disposal of waste materials in our production as low as possible.
We want our activities in environmental protection to be used as an element of marketing and in the realization of potentials to reduce costs.
